

Contributions

rhheilma made Card and Deck classes and Player/Dealer agents. Also, wrote all functions within Deck to deal cards.

jtdwyer93 wrote the auto_move function and hit function as well as provided the base for compute_gains

Inbradsh created parsweep.py

All members of team worked to compute individual and total counts in get_count.

Inbradsh and rhheilma worked together to finish compute_gains functions, made table class that contained win/loss criteria for players and run function to allow simulation to work. Also, created driver.py.

Abstract/Methods written by jtdwyer93.

Result/Conclusion put together by Inbradsh

Proposal/Background/Acknowledgements written by rhheilma
